2. The application has been amended as follows:
 - a. Cancel claims 16-18.

Allowable Subject Matter

3. Claims 1-15 are allowed.

The prior art of record fails to teach in combination as claimed a signal jitter measuring device for quantifying a jitter between an input signal fed into a phase locked loop and a corresponding output signal from the phase locked loop, where the phase locked loop provides a first phase difference signal and a second phase difference signal. A jitter-level output unit coupled to the phase-relationship detection unit is responsive to the first phase difference signal, second phase difference signal and the phase relationship signal for generating a jitter-level output signal of the signal-measuring device. This

Art Unit: 2858

corresponds to the level of jitter between the output signal and the input signal of the phase locked loop.
